ACCES I/O Products Releases 20 New PCI Express RS-232/422/485 Serial Communication Cards

SAN DIEGO, CA—July 14, 2010—ACCES I/O Products, Inc., is pleased to announce the release of a new family of PCI Express serial communication cards featuring both DB9 and RJ45 connectivity—the PCIe-COM family. These PCI Express cards feature a selection of 8, 4, or 2-ports of software selectable RS-232, RS-422, and RS-485 serial protocols. The cards feature a x1 lane PCI Express connector which can be used in any available x1, x2, x4, x8, x12, or x16 PCI Express expansion slot. The PCIe-COM product line has been designed for use in retail, hospitality, automation, gaming, and defense industries along with applications such as point of sale systems and kiosk design.

Each RS-232 port is capable of supporting data communication rates up to 921.6 kbps and implement full modem control signals to ensure compatibility with a broad variety of serial devices. RS-422 and RS-485 modes support data communication speeds up to 3 Mbps. Existing serial peripherals can connect directly to industry standard DB9M or RJ45 connectors which are provided on-board each card or via a breakout cable.

The PCIe-COM family was designed using type 16C950 UARTS and use 128-byte transmit/receive FIFO buffers to decrease CPU loading and protect against lost data in multitasking systems. New systems can continue to use legacy serial peripherals, yet benefit from the use of the high performance PCI Express bus. The cards are fully software compatible with current PCI 16550 type UART applications and allow for users to maintain backward compatibility.

Available accessories include a broad range of cables, screw terminal boards and breakout connection boxes for a variety of quick and easy connectivity options.

Key features of the PCIe-COM family include:

- **8, 4, and 2-port PCI Express serial communication cards (20 models to choose from)**
- **Software selectable RS-232, RS-422, and RS-485 protocols, per port**
- **High performance 16C950 class UARTs with 128-byte FIFO for each TX and RX**
- **Supports data communication speeds up to 3 Mbps simultaneously (RS-232 up to 921.6 kbps)**
- **+/- 15kV ESD protection on all signal pins**
- **Full modem control signals in RS-232 mode**
- **Software compatible with all operating systems**
- **On-board industry-standard DB9M or RJ45 connectivity (3' DB9M breakout cable also available)**
- **9-bit data mode and RS-485 full-duplex (4-wire) fully supported**
- **RS-232 only versions and extended temperature (-40°C to +85°C) available**

A complete driver support package is provided including an easy-to-use Windows terminal program for testing your COM ports. This simplifies the verification of proper COM port operation. The cards install as standard COM ports in all operating systems including DOS, Linux (including Mac OS X) and Windows 2000/XP/2003/Vista/7.

For additional information, readers can view a data sheet and manual for the new PCIe-COM family by visiting the product webpage at www.accessio.com/pcie.

About ACCES I/O Products, Inc.

For over 20 years, ACCES I/O Products, Inc. has supplied an extensive range of analog, digital, serial communication, and isolated I/O boards and solutions. ACCES also offers complete systems, integration services and enclosures with a quick turn-around on custom projects including software. ACCES products are designed for use with PC/104, PCI, PCI Express, Low Profile PCI, Pico-ITXe, Pico-I/O, ETX, USB, USB/104, USB/PICO, Ethernet and ISA, as well as distributed and wireless I/O. All hardware comes with a 30-day, no-risk return policy and a three-year warranty. For further information, visit the company's web site at www.accessio.com

Price: Prices range from \$179 to \$549, depending on model
Please inquire for OEM and volume pricing

Availability: Now

Delivery: Stock to two weeks ARO
